## 1 | def of a vector space

- Props of addition and scalar multiplication in  $F^N$

- +: comutative, associative, identity
  - \* every element has an additive inverse
- \*: associative, identity
- addition and scalar multiplication, connected by distributive props

- let  $V$  be a set with an addition and scalar multiplication that satisfy the props,

**\*\*addition, scalar multiplication\*\***

- addition: assigns an element  $u+v$  in  $V$  to each pair of elements  $u, v$  in  $V$
- scalar multiplication:  $lv$  with  $l$  in  $F$  and  $v$  in  $V$

**\*\*vector space\*\***

is  $V$  with addition and SCMUL with:

- commutativity
- associativity
- additive idenity
- additive inverse
- multiplicative identity
- distibutive properties

- no multiplicative inverse?

- is this how you solve the 0 issue?

- vec, point

- elements of vec space are called vecs or points

- simplest vec space:  $\{0\}$

- $F^{\infty}$  is the set of all seqencues of elements of  $F$

- additive identity: seqnece of all zeros

- vector space can include a set of functions? not quite..

- let  $S$  be a set, and  $F^S$  be the set of functions from  $S$  to  $F$
- what?? #review

- let  $S$  be the interval  $[0,1]$  and  $F=R$

- $R^{\setminus[0, \setminus 1]}$  is the set of real valued function on the interval  $[0,1]$
- ??

- $F^N \rightarrow F^{1,2,\dots,n}$
- $F^{\text{infin}} \rightarrow F^{1,2,\dots}$
- vector spaces need unique additive inverse
  - $0' = 0' + 0 = 0 + 0' = 0$
  - \* nicer than my proof
- unique additive inverse
  - $w = w + 0 = w + (v + w') = (w + v) = (w + v) + w' = 0 + w' = w'$

$V$  denotes a vector space over  $F$

1. no multiplicative inverse required?
2. what does the set of functions from  $S$  to  $F$  mean?

## 1.1 | exercises

1. prove that  $-(-v) = v$ 
  - (a)  $-(-v) = -1(-1v) = (-1 * (-1))v = 1v = v$
2.  $ab = 0$ , prove that  $a$  or  $b = 0$ 
  - (a)  $a=0/v = 0, v=0/a = 0$
3. empty set is not a vector space, it fails to satisfy only of the reqs. which one?
  - (a) no additive identity
    - i. "there exists an element  $0$  in  $v$ " no there doesn't.
