

## 1 | Types of Discontinuity

### 1.1 | Infinite Discontinuity (vertical asymptote)

**Double Sided Limit:** does not exist **Function:** not defined

$$f(x) = \frac{x^2+2}{x^2-4} \text{ where } x = 2$$

### 1.2 | Jump Discontinuity (gap)

**Double Sided Limit:** does not exist **Function:** defined

"a ceiling function"  $f(x) = \lceil x \rceil$  where  $x = 3$

### 1.3 | Point Discontinuity (hole)

**Double Sided Limit:** exists **Function:** not defined

$$f(x) = \frac{x^6-1}{x^{10}-1} \text{ where } x = 1$$

---

Division by 0/infinite discontinuity  $\Rightarrow$  undefined

Hole  $\Rightarrow$  not defined

Sq. Root Functions  $\Rightarrow$  not defined when  $x = \{\text{negative number}\}$
