I tried to do this challenge: <https://www.honeynet.org/challenges/forensic-challenge-13-a-message-in-a-picture/>

And I failed! Utterly and entirely. Unfortunately I have no time to spend on this outside of class until the 16th because of my mathematical contest. Perhaps I will revisit it then.

Doing steganography seems like a lot of guess and check, of which I guessed the wrong things. I spent most of my time looking into LSB, a technique for encoding messages in images by modifying the Least Significant Bit.
