1 | Title of the Document

This is some text, beginning our document. This is an assignment. I am, very, tired.

Chicken? *Chicken*. **Chicken!**

"it's like alexa on an industrial scale" wait wha

ts like alexa on an industrial scale

just	table	tingz
a	b	c

The above table still needs some work.

1.0.1 | A Subsection

We have a subsection, and in the subsection, we have some code!

```
def does_it_halt(program):
    return True
```

```
# les meander.
```

- also, of course.
- we need a - bulleted - list - with indents that go up
 - and indents that go down
 - * which is deeply nested,
 - pretty regardless
 - and quirky
- does this work?

We also have $\cancel{ATE}X$

$$\frac{x^2}{4} + \frac{\sin^5(x)}{5} - \frac{2\sin^3(x)}{3} + \sin(x)$$

and also, inline latex which works like this with θ_x and stuff

1.0.2 | Another Section

- With a lightly nested list
- Because I do a lot of things like this
 - This being a lightly nested list

- Where most things are on the original row
- But sometimes
 - We something nested like this

The word, **important!**

pre cool, right?
