## *Nitrogen Fixing*

Cannot use  $N_2$  (*nonreactive nitrogen*) in the air. We need to somehow "fix" it.

### 1.1 | **Where it comes from**

20bio201srcWorldNitrogenSource.png

#### 1.1.1 | **Half from Bacteria | Biological**

- KBe20bio101refBacteria
- Diazotrophs (bacteria which have Nitrogenase)
  - Symbiotic bacteria in the soil with legumes
    - \* That's why legumes have more protein, because they have more available nitrogen.
    - \* Nitrogenase!
  - Urine -> urea -> lots of ammonia -> good for plants / cows maybe?

#### 1.1.2 | **Half from industrial nitrogen fixation | Industrial**

- Haber-Bosch process
  - Invented by the same guy who invented poison gas / chemical weapons
  - Without it, we wouldn't be able to feed around a third of the current population.
