

#flo #ref #disorganized #incomplete

1 | Taproot, v4. let's do it.

(in rust.)

1.1 | needs work

- collaboration
- syncing

1.2 | changes

- org-md pairs
- online linker
- some naming scheme changes
 - for collaboration
- arbitrary components and custom templates
 - arbitrary "parsers"
 - and also, a component library that shows off all of our components
- segment based linking
- better searching!
 - <https://github.com/deepset-ai/haystack> ?
- online editing?
- sideline ui to show metadata?
- graph view!

1.3 | stack

1.4 | cool digital gardens

- <https://github.com/MaggieAppleton/digital-gardeners> place to search for
- <https://jzhao.xyz>
 - really like the backlinks, node view
 - the art at the top, which corresponds to the tags (doesn't need to tho)
 - don't like how linear it is..

- incredibly clean.
- https://notes.andymatuschak.org/About_these_notes
 - note preview on hover!
 - see multiple notes at once
 - * this leads to super low nav friction
- <https://notes.tomcritchlow.com>
 - not much good here... but i like the muted highlight
- <https://maggieappleton.com/garden>
 - interesting seperation of notes types,
 - and sort w/ note stages (and **custom icons** for them)
