1 | Responsibility of AI

AI are tools, so are guns; so guns may be a good proxy for the AI.

There are scopes by which AI is like gun and scopes whereby they are humans.

- **Does corporations that leverage AI regulated deployment of content have a responsibility for the curation of generated content?**
- How does the licensing of AI products to tech firms like Microsoft raise issues of ownership and responsible deployment? When things go wrong, is the creator or licensee responsible?
- Should there be international regulation w.r.t. AI use and deployment
- "AI" for spacebourn projects
- Should you be able to sue company for malpractice?
- Is guns a good proxy for AI?
