

n *

<g.C />

```
import { Canvas, useFrame } from 'https://cdn.skypack.dev/react-three-fiber'

function Box(props) {
  // This reference gives us direct access to the THREE.Mesh object
  const ref = useRef()
  // Hold state for hovered and clicked events
  const [hovered, hover] = useState(false)
  const [clicked, click] = useState(false)
  // Subscribe this component to the render-loop, rotate the mesh every frame
  useFrame((state, delta) => (ref.current.rotation.x += 0.01))
  // Return the view, these are regular Threejs elements expressed in JSX
  return (
    <mesh
      {...props}
      ref={ref}
      scale={clicked ? 1.5 : 1}
      onClick={(event) => click(!clicked)}
      onPointerOver={(event) => hover(true)}
      onPointerOut={(event) => hover(false)}>
      <boxGeometry args={[1, 1, 1]} />
      <meshStandardMaterial color={hovered ? 'hotpink' : 'orange'} />
    </mesh>
  )
}

<Canvas>
  <ambientLight intensity={0.5} />
  <spotLight position={[10, 10, 10]} angle={0.15} penumbra={1} />
  <pointLight position={[-10, -10, -10]} />
  <Box position={[-1.2, 0, 0]} />
  <Box position={[-1.2, 2, 0]} />
  <Box position={[1.2, 0, 0]} />
  <Box position={[4, 0, 0]} />
</Canvas>

<div style={{textAlign: "center", fontStyle: "italic"}}>oh no</div>
```

this is better because you dont even need to think about escaping. try, see if can change muscle mem?
<https://github.com/zhou13/vim-easyescape>

might be interesting: [obsidian://show-plugin?id=obsidian-latex-suite](#) better than the current plugin?

super clean proof that $1 = 0.\overline{999}$:

$$x = 0.\overline{999}$$

$$10x = 9.\overline{999}$$

$$9x = 9$$

$$x = 1$$

"most of the time, you are stuck." - Sheldon Axler

huh, looks interesting. check this out later <https://docs.helix-editor.com/keymap.html>

datum, being the singular form of data! this is why you say "these data" instead of "this data"

https://docs.google.com/document/d/1Dos29w-PMHbPD9ZFyTp_8CkZP3e72KeR6VxetF0nRR4/edit category theory mahn doc

dil·et·tante

a person who cultivates an area of interest, such as the arts, without real commitment or knowledge.

"a wealthy literary dilettante"

mahn, <https://github.com/starship/starship>

this is sick https://www.reddit.com/r/unixporn/comments/souvlt/bspwm_i_was_told_you_guys_would_like_my_startup/

"Categorical compositional distributional semantics, also known as DisCoCat for short,"

quantum resources, from tim! - <https://www.quantinuum.com-qubit.guide> - <https://topos.site/topos-colloquium/> - ZX-calculus? like, pauli matrices? - <https://graphicallinearalgebra.net> - we can have three dimensional algebra?? - search for: diagramatic category theory, string / sheet diagrams - associahedron - tropical geometry?

interesting category theory reading from [cite/t:@nickm] <https://drive.google.com/file/d/1lKQZ6dMxGTHZggNVbQG9JgGGb/view> and also, <https://drive.google.com/file/d/1lC70eM7FTx7cVVv3ILijqWJVtugoEtVE/view> #readingsuggestion

#name posit

<https://github.com/yoav-lavi/melody> this could make writing regex way easier, check it out later!

gini coefficient is crazy elegant! super #cool way of quantification

toon shaded mandlbulb!!! <https://youtu.be/h9NSV3Tj8Q8?t=34> KBxBlenderFractals gotta try and replicate.

this font is epic <https://dtinth.github.io/comic-mono-font/> use in tuts! #notcursed

one of the best units: grams/mile! ~barak (*for car emissions*)

helpful to change speed of media easily on multiple different sites `js document.querySelector('video').playbackRate = 3`

got published in that journal one time... figure out what it was and update resume stuff also, add National ctf time team rank 59

to experiment with, when on windows: <https://www.nvidia.com/en-us/studio/canvas/>

#name ch!!i like the pepper! figma design is here

planck's constant is denoted as h because it was meant to be a placeholder! so he called it, holder!

want to get this working: <https://github.com/Lorago/vfetch> <https://github.com/Rosettea/bunnyfetch> <https://github.com/o2sh/onefetch> <https://github.com/kiedtl/gfetch>

quantum mechanics, "I know everything about your car but unfortunately I can't tell you anything about any of its parts."

`dbg!(foo) // the superior way to print debug in rust.
// no more wack dedub traik println!-ing!`

better way to floor in js `js num | 0` turns out, `parseInt` sucks! hint: try `parseInt(0.0000000000002)`

really nice arch config: https://www.reddit.com/r/unixporn/comments/sh2lme/bspwm_levuaska_my_attempt_on_making_a_color_scheme/

good article on mathematics/quantum/index from thomas rimer: <https://quantum.country/qcvc> check this out later!

ternary operators are epic. python # python (falseValue, trueValue)[test] the only thing is, this evaluates both things... instead, can use

```
a if x else b
```

"don't become a monk in a monestary" - barry, referring to note taking

github has a quickswitcher! this is a gamechanger, thx [cite/t:@zbuster05].

"classes of representation and how they move together" is what algebra is! ~-ted

<https://github.com/Exr0nProjects/obsidian-sage> yooooo?? [cite/t:@exr0n] made a sick plugin! to try out.

<https://github.com/daaru00/obsidian-commander> could be interesting. would love it to show the output below the block, <https://forum.obsidian.md/t/new-plugin-sagecell/13364> style.

w/ darkreader, makes lots of ugly pages look nice

```
html {  
  /* max-width: 111vh; */  
  max-width: 78rem;  
  padding: 3em 1em;  
  margin: auto;  
  line-height: 1.75;  
  font-size: 1rem;  
}
```

modified from <https://www.swyx.io/css-100-bytes/>

python infix operators? this is sick. <http://tomerfiliba.com/blog/Infix-Operators/> essentially, of `add(add(add(5,6),7),8)...` we can write `py 5 |add| 6` with a bit of trickery.

<https://www.yourdictionary.com/equivalate> is a word! this is amazing.
