Zach's Take: KB20200828003333 Jack's Take: KBhISOS101Thaetetus Reading: KBTheaetetusReading.pdf

# 1 | THEATETUS

Starts by questioning the trust of others knowledge

Disregard Theo's statement of their faces being alike because is not an artist – this doesn't quite follow.

### 1.1 | Socrates / Plato on Knowledge

Sophos and sophia = expert and expertise

Thea -> Claims that knowledge is perception

Soc -> Argues differing perception of the world + false perceptions

Soc -> perceptions is true for the perceiver,

Soc -> perception = sight, perception = knowledge, memory = knowledge, close your eyes and you are "forgetting."

To say 'He doesn't see' is to say 'He doesn't know', if 'sees' is 'knows'?

Then we have got to say that perception is one thing and knowledge another?

Then knowledge is to be found not in the experiences but in the process of reasoning about them; it is here, seemingly, not in the experiences, that it is possible to grasp being and truth.

Knowledge cannot be found in "sense perception at all," and instead to find knowledge we must engage in thought (judgment)

$$True--Judgment$$

(With an account / argument)

Correct judgment accompanied by knowledge of the differentness breaks.

- 1. Knowledge is arts and sciences
- 2. Knowledge is perception
- 3. Knowledge is true opinion (Judgment
- 4. True judgment with an account

#### 1.1.1 | Personal Thoughts: What is Knowledge?

*Knowledge* does not need to be *truthful* for it to be considered knowledge. We cannot know what is truly, *truthful*. Even things that we "know" arn't truthful today is / was considered knowledge. Eg. Leaches.

Instead, knowledge should be defined as a set of statements which we assume to be true?

Knowledge = things we know But I think therefore I am and whatnot rendered that definition useless.

Given that we cannot know whether or perception is true or not, it means that any useful definition of knowledge must ignore truth.

# 2 | Record of perception is knowledge.

Record being memory, or some other form of storage (writing, bits, ect.)

Soc disproves D2 by saying that perception is bodily, and therefore knowledge is bodily. This would make abstractions such as math fall apart.

Wind example works fine. People have conflicting knowledge.

And Soc's argument about memory is thwarted by the record argument.

Says that sight, perception, and knowledge is all the same thing. pg. 13

What is funneled into record through sight and perception is knowledge, not the sight itself.

'He doesn't see' clearly != 'he doesn't know'

Perception is one thing, and knowledge is another. Perception is the avenue to knowledge.

### Discussion point, begin.

Despite the fact that this reading was interesting, it was deeply unsatisfying. We end with no definition of knowledge, a dead Socrates, and an *opportunity* for a definition of knowledge. I would like to explore this opportunity with a slight modification to Theaetetus's second definition (D2).

I am operating in the premise that we fundamentally cannot know how "close to truth" (for lack of a better term) our perception is. This renders any definitions of knowledge involving truth useless.

D2 essentially states that knowledge is perception. This gets "debunked" by Socrates in multiple ways. Socrates points out that people can have differing perceptions of the same event, and therefore perception cannot equate to truth, and by extension, knowledge.

I would respond that knowledge does not have to be "truthful" in order to be knowledge, otherwise the very concept of knowledge would be flawed.

Socrates also equates perception to sight, and by operating inside the premise of D2, perception to knowledge.

But to say 'He doesn't see' is to say 'He doesn't know', if 'sees' is 'knows'

He then brings up memory, and this is where my slight alteration comes into play. A person does not forget knowledge when they don't see it, as knowledge is not perception but rather a *record* of perception. This record, and perception for that matter, does not need to be biological.

Huxley • 2021-2022 Page 2

This is my proposed definition of knowledge. I am mostly sure it is incorrect, and I am eager to find out why. Sorry if this was a little long, I was just very unsatisfied with the conclusion of this reading.
