1 | Limit Laws

Here 'em:

Limit Laws Suppose that c is a constant and the limits

$$\lim_{x \to a} f(x)$$
 and $\lim_{x \to a} g(x)$

exist. Then

1.
$$\lim_{x \to a} [f(x) + g(x)] = \lim_{x \to a} f(x) + \lim_{x \to a} g(x)$$

2.
$$\lim_{x \to a} [f(x) - g(x)] = \lim_{x \to a} f(x) - \lim_{x \to a} g(x)$$

3.
$$\lim_{x \to a} [cf(x)] = c \lim_{x \to a} f(x)$$

4.
$$\lim_{x \to a} [f(x)g(x)] = \lim_{x \to a} f(x) \cdot \lim_{x \to a} g(x)$$

5.
$$\lim_{x \to a} \frac{f(x)}{g(x)} = \frac{\lim_{x \to a} f(x)}{\lim_{x \to a} g(x)} \quad \text{if } \lim_{x \to a} g(x) \neq 0$$

6.
$$\lim_{x \to a} f(g(x)) = f\left(\lim_{x \to a} g(x)\right)$$

7.
$$\lim_{x \to a} f(x)^n = \left(\lim_{x \to a} f(x)\right)^n$$

1.1 | Trig Limits + Squeeze Theorem!

Very logical theorem — if two things "enveloping functions" approach the same value, and the function in the middle will approach the same value

#disorganized

- · Dampening oscellation
- Could be modeled with $\frac{\sin x}{x}$

The Squeeze Theorem If $f(x) \le g(x) \le h(x)$ when x is near a (except possibly at a) and $\lim_{x \to a} f(x) = \lim_{x \to a} h(x) = L$ then $\lim_{x \to a} g(x) = L$
