:ROAM_{REFS}: `https://quantumish.github.io`

1 | **TODO Philosophy**

2 | **Templates**

Org Roam capture supports templates (although they are an abuse of the capture system).

Example config:

```
("d" "default" plain (function org-roam--capture-get-point)
    "%?"
    :file-name "%<%Y%m%d%H%M%S>-${slug}"
    :head "#+title: ${title}\n"
    :unnarrowed t)
```

Note that "d" ("default") is the default org roam will select, and parameters like `:file-name`, `:head` and `:unnarrowed` control the respective properties of the file.

More detailed config info can be found here.

3 | **References**

Org Roam notes can contain references to websites or papers (via org-ref). The methods to reference either type of source are shown below.

```
#+title: Google
#+roam_key: https://www.google.com/
```

```
#+title: Neural Ordinary Differential Equations
#+roam_key: cite:chen18_neural_ordin_differ_equat
```

4 | **Misc Variables**

The variable `org-roam-index-file` can be customized to allow proper usage of the `org-roam-jump-to-index` command.

5 | **More Config**

`(require 'org-roam-protocol)` is useful!
